

Instructions for equine cellular analysis testing via mane hair

Items needed for the cell analysis:

- 1)** Small stainless steel scissors: Manicure scissors work too and are available at any drug store.
- 2)** One envelope for each hair sample (whiteout padding)
- 3)** A teaspoon (or a good mental impression about the amount of hair filling a teaspoon)
- 4)** Patient forms (please enclose them in the mail along with the hair sample)

Taking the mane hair sample:

We need the mane hair which grew out recently. This is the hair closest to the body. Cut the hair closest to the skin along the crest from a few different areas. Avoid forelock and wither area. Then cut the older tips off and discard them so that the length of the test hair remains about half an inch long.

Use a separate white paper envelope for each hair sample. Please do not use aluminum or plastic wrap.

Enclose the patient forms. Send hair and forms to:

Equolution LLC, SoCal Office
Attn. Dr. Gabriele Gross
27762 Antonio Parkway, Ste. L1-544
Ladera Ranch, CA 92694

From the time we receive the sample from you, it takes roughly two weeks for the results to come in. When we get the report back, we will analyze it and forward it to you via email.
